

Summary of corrections

Abstract- It was reformulated for it to provide more precision on theses, authors and themes treated in the main body of the work.

Format - The error of not including the gutter margin was solved, as well as the problems regarding the separation of the chapters, the numbering of pages on the contents page and similar issues.

Bibliography - It was rearranged according to university referencing guidelines, with due notice of alphabetical order and positions of name of author, date and editors.

Writing- A thorough proofreading was purchased with "trueeditors.com", but due to the intricacies of the theme, its help was of limited value. Nevertheless, for our part we reread the work several times to make sure any typos were finally rooted out, and as well tried to improve some formulations, syntax and the like. Regarding neologisms, the work could not be substantially modified, because the nature of these terms is inextricably related with the subject matter and any longer explanation of them would enlarged the work making it surpass the limit of words. The following table shows the number of instances in which a modification was considered necessary:

<i>Typos</i>	69
<i>Syntax and redaction</i>	50
<i>Stylistic choices</i>	59
<i>Coherence mistakes</i>	6
